

Fiche TD 1 : input, output and storage

OBJECTIFS :

- Savoir reconnaître les différences entre input devices, output devices et storage devices
- Savoir utiliser la voix passive en anglais

TASK 1:

The following words or expressions appear in the wrong order. So match them to the right group (input devices, output devices or storage devices) they belong to.

Input devices	Output devices	Storage devices
joystick	large hard disc	lamp
barcode reader	tape	copyholder
keyboard	double density floppy	graphicscreen
chair	monitor screen	printer
microphone	footrest	digital camera
CD-ROM	scanner	high density floppy

TASK 2: READING

Text: The Pentium M

The Pentium M family was introduced as a part of Intel Centrino technology on March 12, 2003. The Centrino technology is a set of components, including Intel Pentium M or Celeron M processor, Intel 855 or 915M chipset and Intel PRO/Wireless adapter, that can be used to build mobile systems with **integrated wireless support** and **extended battery life**. All Centrino components were specifically **designed for** mobile applications, that is their primary goal was to provide **reduced power consumption**, even if in some cases this resulted in slightly lower performance. Nevertheless, due to shorter instruction pipeline and many improved or new features, such as enhanced branch prediction, dedicated stack manager and others, the Pentium M micro-architecture is much more power and CPU efficient than Pentium 4 micro-architecture. For example, Pentium M CPU **running at 1.6 GHz** usually performs as fast or faster as Pentium 4 2.4 GHz while consuming much less power.

Pentium M micro-architecture takes some features from Pentium III and Pentium 4 micro-architectures, and adds many **new features**. Like Pentium 4 CPUs, Pentium M microprocessors utilize quad-pumped Front Side Bus running at 100 and 133 MHz, or effectively at 400 and 533 MHz. The Pentium M CPU has separate 32 KB instruction and data caches (twice as large as on Pentium 4 or Pentium III), large 1 or 2 MB level 2 cache, and includes MMX, SSE and SSE2 instructions. The processor supports many **power-saving modes** that are present in Mobile Pentium 4, including Deeper Sleep mode. In addition to these modes the CPU contains logic that turns off parts of the CPU that are not needed. The Intel Pentium M also **includes** Enhanced SpeedStep technology - this technology allows the CPU **to switch to** lower frequency and operating voltage when maximum performance is not required.

Pentium M microprocessors are packaged in 479-ball micro FC-BGA and 478-pin micro FC-PGA packages. This micro FC-PGA package is not compatible with any other 478-pin **packages** that Intel used with mobile Pentium III-M, Mobile Pentium 4/4-M, Core Duo/Solo and mobile Core 2 Duo processors.

Extract from an unknown author's work

I. Read the text carefully, use the context, and give the French for the word or group of words in bold.

Paragraph one: integrated wireless support; extended battery life; reduced power consumption; designed for; running at 1.6 GHz.

Paragraph 2: new features; power-saving modes; includes; to switch to.

Paragraph 3: packages

II. Read the text and answer the questions below

1. When was the Pentium M introduced? Which family does it form part of?

2. What are the features of the Centrino technology?
3. What was the principal goal in the design of Centrino components?
4. How does the Pentium M micro-architecture compare to Pentium 4 in terms of power and CPU?
5. Which type of microprocessor does the Pentium M use?
6. Why, in your view does the CPU contain logic that turns off parts of the CPU that are not needed?
7. Can the micro FC-PGA package work with the packages used by mobile Pentium III-M and Core Duo and Core 2 Duo processors?
8. What is the function of the Enhanced SpeedStep technology?

TASK 2: GRAMMAR

Turn the following sentences into the passive voice.

1. It corrected the error.
2. He plugged the cable.
3. He adjusts the pointer.
4. He damaged the CD.
5. He bought a removable hard disc.
6. Computer uses floppy discs.
7. He is always using a magnetic tape.
8. My brother has taken the magneto-optical disc.
9. He should have sent me the fixed hard disc.
10. This boy seem to have stolen the CD-ROMs.

AUTO-ÉVALUATION

Saver-vous faire la différence entre input devices, output devices and storage devices	Oui	Non
Savez-vous utiliser la voix passive en anglais
